Publication Ethics

Publication Ethics and Publication Malpractice

Before submitting any material, please read carefully our journal ethical and publication malpractice statement. In order to avoid any type of publication malpractice each submission must be accomplished by our journal sample “Cover Letter” signed by all of the authors. Until to sign the “Cover Letter” please read carefully the “Declaration” section at the end of the letter (above the signatures).

Originality, double submission and plagiarism:

Pisces Hungarici primarily contains original papers not published elsewhere and have been presented by the authors on one of the forum of the Hungarian Ichthyological Society. However, the journal is open for other manuscripts as well.

Submitting your paper for evaluation concomitant to other journals is unacceptable. In such cases the manuscript will be rejected automatically and all of the authors lose the right to submit and publish manuscript to/in the “Pisces Hungarici”.

The authors need to ensure that the original data in their manuscript can be clearly distinguished by the one published in other scientific papers. The authors of the manuscript need to ensure that the text, illustrations, and any other materials included in the manuscript do not infringe upon any existing copyright or other rights of anyone (also see our “Cover Letter”). Papers with any type of plagiarism will be rejected automatically and the authors lose the right to submit and publish manuscript to/in our journal.

Authorship and collective responsibility:

All authors listed in the manuscript need to meet the authorship criteria and all of them participated in the work in a substantive way and are prepared to take public responsibility for the work (also see our “Cover Letter”). All authors have contributed to the manuscript and that common agreement has been reached before submission (also see our “Cover Letter”). In other case the manuscript can't be accepted for evaluation in order to be published in the “Pisces Hungarici”.

The sample “Cover Letter”:

Our “Cover Letter“ in which appear all of the above mentioned ethical statements must be signed by all of the authors. Manuscripts submitted without the “Pisces Hungarici”'s sample “Cover Letter” or with a not all author signed one, will be rejected.

Methodological ethics:

The authors of articles that are based on experiments that caused injuries or death of animals should explain and justify the grounds of the study and state that the scientific results of the study is at least in trade-off with the sufferings caused. In the Materials and Methods of the manuscript, authors should detail precisely the conditions of maintenance, transport, anaesthesia, and marking of animals. When available, references should be added to justify that the techniques used were not invasive. When alternative non-harming techniques exist, but were not used, the manuscripts may not be considered for publication.

Peer-review:

The editors of the “Pisces Hungarici” reserve the right to reject manuscripts without peer-review if they do not comply the author's guidelines or are beyond the aim and scope of the journal. Each paper will be sent to at least two independent reviewers. If there are inconsistencies between the reviewers, a third reviewer will be asked to review the manuscript. The editor will decide the acceptance or rejection of the manuscripts according to these reviews.
